 Produit	 Modèle	 Résolution	 Objectif	 Champ de vision	 Grossissement
	• MR325	NETD ≤ 20mK 384*288 12μm	25mm	7.5°x6°	4/8/12X
	• MR335	NETD ≤ 20mK 384*288 12μm	35mm	5.5°x4.5°	5/10/15X
	• MR635	NETD ≤ 20mK 640*480 12μm	35mm	5.5°x4.5°	5/10/15X

Les imageurs thermiques de notre série MR sont équipés d'un capteur thermique NETD ≤20mK 12μm, capable de capturer des images thermiques ultra-claires (384*288/640*480). La série MRX est une lunette d'imagerie thermique modulaire conçue pour toutes les conditions météorologiques (24/7). La série MR intègre un télémètre laser et un calculateur balistique pour garantir des tirs précis. Avec sa polyvalence et ses performances fiables, la série MRX est idéale pour les chasseurs, les passionnés de tir et les amateurs de sports en plein air.

1200M LASER RANGING BULLET DROP COMPENSATION

The MR series scope combines a 1200-meter laser rangefinder with ballistic calculations, providing rapid distance readings and instant aiming guidance in the field. Its 50mm exit pupil design ensures a comfortable viewing posture even during extended observation periods.

APP+WIFI+VIDEO RECORDING

The MR series scopes, with their built-in Wi-Fi module, allow for seamless connectivity between the device and your Android or iOS smartphone via an app. This powerful combination offers numerous advantages, such as wireless software updates and the ability to stream live images directly to your mobile device screen, helping you capture crucial moments without interrupting your hunt.

HD CIRCULAR DISPLAY

The circular viewfinder replicates the field of view of traditional sights, while the high-definition screen provides sharp and clear imaging. Five reticle lines are available to suit different targets. The viewfinder, combined with a customizable reticle, makes aiming intuitive and easy, applicable to multiple scenarios, with quick reticle switching and stable and reliable aiming accuracy.

5 Reticle+5 Colors

AI-POWERED

IMAGE ENHANCEMENT

AI-powered enhancement sharpens edges, reduces noise, and pulls out fine details from any thermal scene. Fog, rain, or low contrast – the image stays razor-sharp so you never miss a critical heat signature. See exactly what you're aiming at, no guesswork

MULTIPLE PSEUDO-COLOR MODES

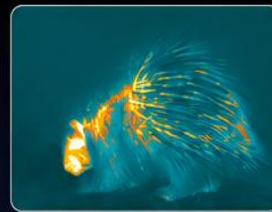

Images can be adjusted by selecting *seven thermal modes* that enhance contrast in different environments.
